### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by P.S.Ramos (US2650286).

In regarding to claim 1, P.S.Ramos discloses (figure 5) a bracket assembly comprising a lifting ring (adjacent 17) defining a first aperture (17) of a predetermined diameter to receive the (electrical) manipulating means (32); a rigid region (adjacent 24) radially extending from the lifting ring (adjacent 17), the rigid region (adjacent 24) having a second aperture (24) disposed there through, wherein the second aperture (24) is adapted to receive a mounting means (26); the lifting ring (adjacent 17) and rigid region (adjacent 24) forming a unitarily formed body; and the lifting region (adjacent 17) proximate to the first aperture (17) at a first end (of 17) and the rigid region (adjacent 24) proximate to the second aperture (24) at a second end (of 24) and the rigid region (adjacent 24) between the first end (of 17) and the second end (of 24) forms a middle area (23).

Regarding to the limitation, "for accommodating a manipulating mean for lifting a hot line grounding set and positioning the clamps on a power line or other conductor" and "to rigidly attach the mounting bracket to the cable clamped", the recitation that has been given very little patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a

Application/Control Number: 10/767,313 Page 3

Art Unit: 2833

self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478 (CCPA 1951).

In regarding to claim 2, P.S. Ramos discloses (figure 1) the bracket assembly wherein the body's middle area (23) is generally parallel to the first end (of 17) and the second end (of 24).

In regarding to claim 4, P.S. Ramos further discloses (figure 5) the bracket assembly wherein the middle area (23) is further formed generally on a second reference axis, generally in the center of the middle area (23) and generally perpendicular to the first reference axis.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nolan et al.(US5,515,236); Baker, Timothy R.(US2004/0173436); De France, Robert (US2002/0177353); Soares et al.(US6,603,075); Duke et al. (US5,011,421) and DOUGLAS HARRY A(US2,145,164) are cite to show the related bracket.

## Allowable Subject Matter

- 4. Claims 6-11 are allowed.
- 5. Claims 3 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

In regarding to claim 3, the prior fails to teach or suggest the bracket assembly wherein the body's middle area is formed to clock the first end relative to the second end generally on a reference axis of a line from the center of the first aperture to the center of the second aperture.

In regarding to claim 5, the prior fails to teach or suggest the bracket assembly wherein the rigid region consists of a clamp of a hot line wire assembly.

Application/Control Number: 10/767,313 Page 4

Art Unit: 2833

In regarding to claim 6, none of prior art teach or suggest a bracket assembly for lifting a hot line rounding set and positioning the clamps on a power line comprising the combination of the bracket and an anti torque arm rigidly attached to the body between the first and second apertures, arranged as claimed.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuongchi Nguyen whose telephone number is (571) 272-2012. The examiner can normally be reached on 8:00AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula Bradley can be reached on (571) 272-2800 ext 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
